Urban Data Science Lab, TAMU

Communities in the 21st Century

- How can science improve forecasts and make predictions about the **future** states of rural, suburban, and urban systems?
- What **theories** explain the structure and function of communities in the 21st Century and what are the critical drivers of change?
- What aspects and intersections of social, built, and natural systems influence the resilience and sustainability of communities and the well-being of the **people** living in them?
- How can successful innovations in one community be **transferred** to others?
- How can integrative research along with **community engagement** improve the quality of life in communities?

Computational Urban Science: Four Layers

- Human dynamics-centered Urban Science
- Platform-based Urban Science
- Action-oriented Urban Science
- Convergence-driven Urban Science
- Interpret, Manage, and Build

Computational Urban Science: Four Layers

- **Human dynamics-centered Urban Science (Geographical Perspective)**
- Platform-based Urban Science (Computer Science Perspective)
- Action-oriented Urban Science (Urban Planning Perspective)
- Convergence-driven Urban Science (Synthetic Perspective)

People, Place, and Space

Hägerstrand (1953)

Tuan (1977)

You're now on the internet more than you aren't on the internet, instead of just using it for school or work.

The internet is currently a constant part of our lives. iStock/SolisImages

You can no longer go on vacation and truly take a break from everything.

<https://www.insider.com/how-life-has-changed-in-the-last-20-years-2018-12#youre-now-on-the-internet-more-than-you-arent-on-the-internet-instead-of-just-using-it-for-school-or-work-1>

You can never really get off the grid these days. mihakonceptcorn/ iStock

Eating at a restaurant has become a social experience.

It has to look good too. Robertus Pudyanto/Getty Images

You now take photos on your cell phone instead of a film camera.

Lots of pictures are taken on smartphones. REUTERS/Jason Reed

[nature](#) > [letters](#) > [article](#)

Published: 12 May 2005

The origin of bursts and heavy tails in human dynamics

[Albert-László Barabási](#) 

Nature **435**, 207–211(2005) | [Cite this article](#)

2366 [Accesses](#) | **1284** [Citations](#) | **49** [Altmetric](#) | [Metrics](#)

The dynamics of many social, technological and economic phenomena are driven by individual human actions, turning the quantitative understanding of human behaviour into a central question of modern science.

Network and Flow

From a centralized, top-down approach to a **decentralized, bottom-up** perspective (Batty 2005).

To **understand cities** we must view them not simply as places in space but as **systems of networks and flows** (Batty 2013).

Space, Time, and Situational Awareness

Social responses in social media data: damage reports, situational announcements, and help requests.

Goals:

- Capture the spatial concentration and specialization of social responses to a disaster.
- investigate how the spatial concentration of topics changes before, during, and after a disaster.

New York

Category	Description
Caution and Advice	Tweets referring to warnings, preparation, advice, and tips (Imran et al. 2015).
Affected People	Tweets referring to people trapped, injured, missing, and killed (Imran et al. 2015).
Infrastructure/Utilities	Tweets referring to infrastructure damage, services closure, built environment, and collapsed structure (Imran et al. 2015).
Needs and Donations	Tweets referring to donations, volunteering, relief, and fundraising (Imran et al. 2015).
Weather and Environment	Tweets referring to weather conditions and environment.
Other	Tweets not referring to any of the previous categories (Imran et al. 2015).

Trajectory Visual Analytics Platform

Trajectory Analytics Project

[About](#) [Contact](#)

TrajAnalytics Software

Our software supports researchers and analysts in transportation studies to conduct visual analytics tasks through interactive data queries and visualization in an iterative, exploratory process. A guideline of usage can be accessed [HERE](#).

[Read More!](#)

Data Loading

TrajAnalytics provides users with an independent data preprocessing software for users to load their own data to TrajAnalytics.

[Start Here!](#)

Road Map Matching

TrajAnalytics automatically fetch corresponding road segments data from OpenStreetMap and match the raw GPS data with road segments.

[Start Here!](#)

Region Map Matching

TrajAnalytics automatically match the raw GPS data with regions (Zip code (USA Only) Regions, Grid).

[Start Here!](#)

Visualization System

TrajAnalytics provides a visual analytics of urban trajectory datasets. It allows users to interactively visualize and analyze trajectories over urban spaces.

[Start Here!](#)

A. Data Loading

1. Input a user name.

TrajModel

Please give your username (Use only alphabet letters and numbers):

Next

2. Input a database name.

TrajModel

Please give your database name (Use only alphabet letters and numbers):

Next

3. Raw CSV file uploading.

TrajModel

Drag and Drop File Here

Or Select File Here

TrajModel currently support .csv and .geoplon files

Next

4. Select and match attributes.

TrajModel

Variables
tripid
latitude
longitude
pdatetime
speed

Question #1

Please specify the trip ID or trajectory ID ?
(Hint: select one from the provided variables)

Next

TrajModel

Variables
latitude
longitude
speed

Question #1

Please specify the trip ID or trajectory ID ?
(Hint: select one from the provided variables)

tripid

Next

Procedure

5. Save TD tables.

TrajModel

TD Table Creation

Hint: Click to create TD table inside your database to be used by TrajAnalytics

Make TD Table

3. Street-Based Map Matching

1. Input a user name.

Please Enter Your User Name...

Next

2. Select a database.

Please choose the database for TrajAnalytics

- traja_porto
- traja_nyc

Next

3. Display heatmap and bounding box of all sample points

4. User edit and select of working region bounding box.

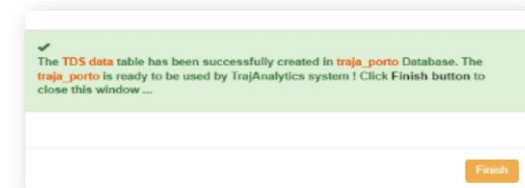

Download street network from OSM

Do Map Matching.

7. Create TDS table in TrajBase.

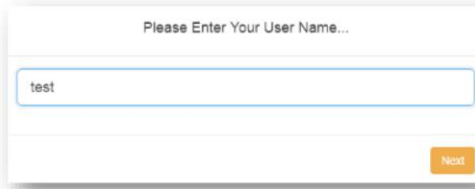

Procedure

C. Region-Based Map Matching

Procedure

1. Input a user name.

2. Select a database.

3. Display heatmap and bounding box of all sample points.

4. User edit and select of working region bounding box.

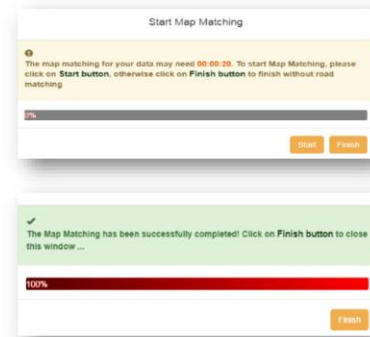

5. Zipcode based area division.

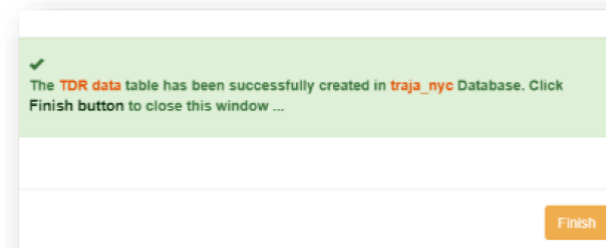

6. Grid based area division.

7. Do Map Matching.

8. Create TDR table in TrajBase.

Procedure

1. Input a user name.

The screenshot shows the first step of a three-step process. At the top, the title 'TrajAnalytics - TrajVis' is displayed. Below it is a progress indicator with three numbered circles: 1 (highlighted in blue), 2, and 3. Underneath the progress indicator are three labels: 'Enter User Name', 'Select Database', and 'Go to TrajAnalytics'. The main content area contains the text 'Enter User Name' followed by a text input field with the placeholder 'Enter User Name'. At the bottom right, there is a blue button labeled 'Next'.

2. Select a database and table

The screenshot shows the second step of the three-step process. The title 'TrajAnalytics - TrajVis' is at the top. The progress indicator has three numbered circles: 1, 2 (highlighted in blue), and 3. Below the progress indicator are three labels: 'Enter User Name', 'Select Database', and 'Go to TrajAnalytics'. The main content area contains the text 'Select Database & Table' followed by two red buttons: 'Select Your Database -' and 'Select Your Table -'. At the bottom left, there is a blue button labeled 'Previous', and at the bottom right, there is a blue button labeled 'Next'.

3. Prepare a set of visualization and interaction tools according to the types of data tables (TD, TDS, TDR)

The screenshot shows the third and final step of the three-step process. The title 'TrajAnalytics - TrajVis' is at the top. The progress indicator has three numbered circles: 1, 2, and 3 (highlighted in blue). Below the progress indicator are three labels: 'Enter User Name', 'Select Database', and 'Go to TrajAnalytics'. The main content area contains the text 'Go to TrajAnalytics'. At the bottom left, there is a blue button labeled 'Previous', and at the bottom right, there is a green button labeled 'Open TrajVis'.

Procedure

1. Specify query area

a. Query by drawing circle on map

b. Query by drawing rectangle on map

c. Query by drawing arbitrary polygon on map

d. Query by loading pre-defined shapes from file

Procedure

2. Specify query time period

Date from: 2013/07/01 00:04 Date to: 2013/07/01 06:39

3. Specify query conditions

a. Query trips starting from the region

b. Query trips ending at the region

c. Query trips traversing region

Kamw, F., AL-Dohuk, S., Zhao, Y., Eynon, T., Sheets, D., Yang, J., Ye, X., & Chen, W. (2018) Urban Structure Accessibility Modeling and Visualization for Joint Spatiotemporal Constraints. IEEE Transactions on Intelligent Transportation Systems. doi: 10.1109/TITS.2018.2888994

Procedure

2. Save lists as (.csv) file

Ranked Records (Len)	Top Records (Flow)	Top Records (Speed)
Trajectory ID		Trajectory Length (Km)
321		1.4273
339		1.9104
373		2.0260
348		2.0452
298		2.0542

1 2 ... 1 - 5 of 66 Items

Select a tab and save the list as .csv file

Save Query Results for Reuse and Sharing

3. Save map view as image

Save map view as image

1. Save charts as image

Save Day/Hours chart as image

Save Week/Days chart as image

COVID-19 Open Research Dataset Search Urban Computing Lab, NJIT

[Tutorial](#) [Data source: https://www.kaggle.com](https://www.kaggle.com)

Enter the text here or click the point on the graph to search the special field.

Abstract Body Text Paragraphs Figure & Table Title Map

Select model: BERT Select clusters: 5

Choosing return full research paper or part of it.

Choosing BERT or TFIDF model to category the research paper and how many categories you want to divide them.

Visualizing the category on the cluster chart. Mouse over the point you can see the title and click them will trigger the search function.

Displaying the research paper on the map by the location mentioned in the research paper.

Different colors mean different topics that paper belongs to and the topic shows below.

The interface displays a cluster chart with points colored by topic. A tooltip for a point shows the title: "Growth of a murine coronavirus in a microcarrier cell culture system" and category: 3. Below the chart, a list of keywords is shown for each category:

- c-1: virus, infection, cells, protein, viral, cov, study, sars, cell, human, results, respiratory, using, viruses, coronavirus
- c-2: chapter, health, disease, covid, infectious, diseases, infections, syndrome, new, acute, novel, china, influenza, patients, index
- c-3: review, also, host, clinical, development, immune, abstract, may, based, research, control, public, potential, including, treatment
- c-4: rna, proteins, infected, two, replication, specific, mice, gene, expression, mhv, sequence, binding, activity, type, found
- c-5: methods, cases, data, associated, background, children, risk, analysis, used, time, pcr, among, severe, high, positive

AUDIO TRANSCRIPT EDITTED ORIGINAL COMMENTS

as a mathematical science building we have lots of programs like master program Ph.D. programs and then we have the physics department they do have master and PhD programs. We have integrated science building it is also known as for all integrated courses and it is really a beautiful building.

AUDIO TRANSCRIPT COMMENTS

most of the students, used to come they used to perform various activities as they can come to the gym they have a swimming pool basketball court, volleyball court, and various other activities at the recreation center it is a parking lot of our recreation center and its really big.

Whenever I used to go I spend lots of time here and feel positive it is really a good place to have activities.

it is really a good place to have activities.

In front, we have the energy Management is responsible for utilities such as electricity, water, sewer, stormwater, natural gas, fuel oil, and steam. It is known as the power plant.

Kent State University's Power Plant supplies steam, electricity, and air conditioning to the Kent campus. Since the university's early years, centralized steam production has been used to provide heat and cooling to the campus community. We have the aeronautics and engineering department towards my right side and then we have MSB building which is known.

as a mathematical science building we have lots of programs like master program Ph.D. programs and then we have the physics department they do have master and PhD programs. We have integrated science building it is also known as for all integrated courses and it is really a beautiful building.

In front of me, it is a library it is one of the tallest buildings and students used to hang around and they used to come during their exam we have lots of books and students do their research.

We have various research material in the library along with the various cafeteria-like Starbucks

student and faculty can have some relaxation time along with that is really a silent place Here we can see it is a student center it is the bus stand of the kent state university student center and student can take the bus to various stop inside the campus and they can stop by various departments

We have the memorial athletic convocation center it is also one of the activities areas where various athletic performance is used to be taken place along with the student graduation ceremony on a small scale take place here various on-campus job opportunity for the students.

About

HOME / MOSSAVAR-RAHMANI CENTER FOR BUSINESS AND GOVERNMENT / PROGRAMS / GROWTHPOLICY / WHAT MAKES CITIES VULNERABLE TO COVID-19? CONCENTRATED POVERTY, SAYS ECON PROFESSOR - EDWARD GLAESER

Excerpt

May 28, 2020, Audio, "Disease has thrived among dense populations since cities began. But COVID-19 is the worst example since 1918, and New York City is America's primary victim, with empty streets and skyscrapers. Can New York and other cities survive this pandemic?"

Scene Graph

Resilient elements of residential buildings

resilient

- 1.High Elevated on Fill
- 2.High Solid foundation (high access , space cannot be used)
- 3.High Open foundation (high access, space cannot be used)
- 4.High elevated foundation (not open)
- 5.Wet floodproofed (hydrostatic opening)
- 6.High-raised basement foundation (maybe in downtown)
- 7.Scarified first floor: first-floor access
- 8.Scarified first floor: second-floor access
- 9.Second-floor access (occupiable first floor)
- 10.Stilt house (one floor high, the space can be used)
- 11.Carport under stilt house
- 12.Enclosed area under stilt house
- 13.garage room under stilt house
- 14.Residential room under stilt house
- 15.Green space
- 16.Elevate critical system
- 17.Independent concrete slabs

News Coverage: https://bit.ly/ENDEAVR_NEWS

By 2022, we will complete the world's first non-profit autonomous bus system in Bell County, Texas. We will expand our capacity to bring free taxi rides and telemedicine services to low-income people with mobility challenges.

Computational Urban Science: Four Layers

- Human dynamics-centered Urban Science (Geographical Perspective)
- Platform-based Urban Science (Computer Science Perspective)
- Action-oriented Urban Science (Urban Planning Perspective)
- **Convergence-driven Urban Science (Synthetic Perspective)**

Convergence and Synthesis (Goodchild 2020)

- problems faced by humanity are arguably more challenging than they have ever been;
- science today is by nature collaborative;
- beyond centripetal academic practice: reward broader perspectives.

Successive levels of convergence for added value

The 7th Symposium on Human Dynamics Research

2021 AAG Annual Meeting, Seattle, WA
April 7-11, 2021

Call for Paper/Panel Sessions

Sponsored by the following AAG Specialty Groups:

- Applied Geography
- Cartography
- Cyberinfrastructure
- Geographic Information Science and Systems
- Regional Development and Planning
- Spatial Analysis and Modeling
- Transportation Geography
- Urban Geography

As a framework promoting human-centered convergence research, human dynamics has the potential to enable more effective and symbiotic collaboration across disciplines to improve human societies. We are particularly interested in topics related to the actionable human dynamics during the Seattle AAG meeting.
